I did a thing...

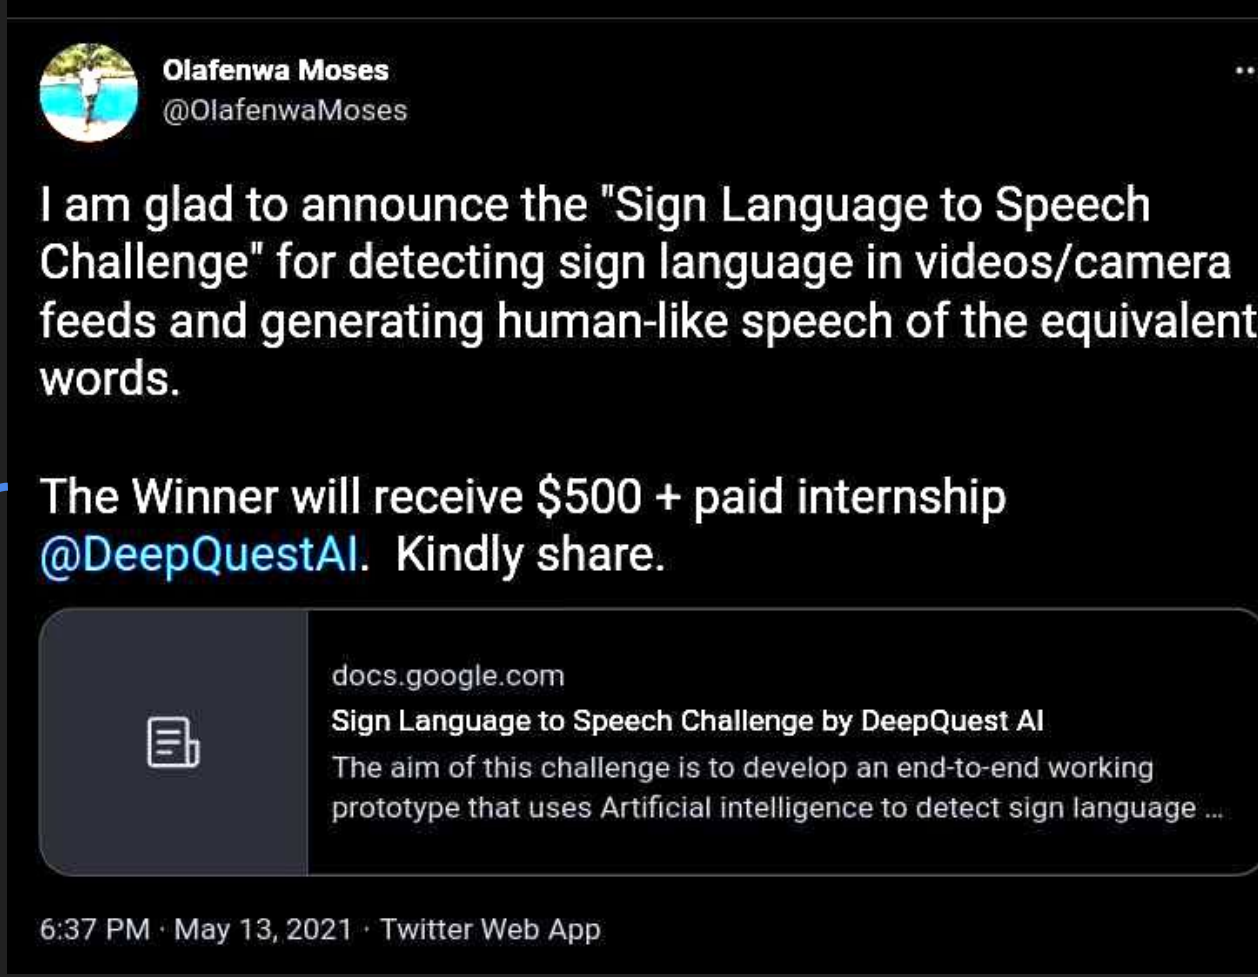

An end-to-end working prototype that detects sign language meanings in images/videos and generate equivalent, realistic voice of words communicated by the sign language, in real-time.

Steven Kolawole
CS Undergrad @FUNAAB, Nigeria

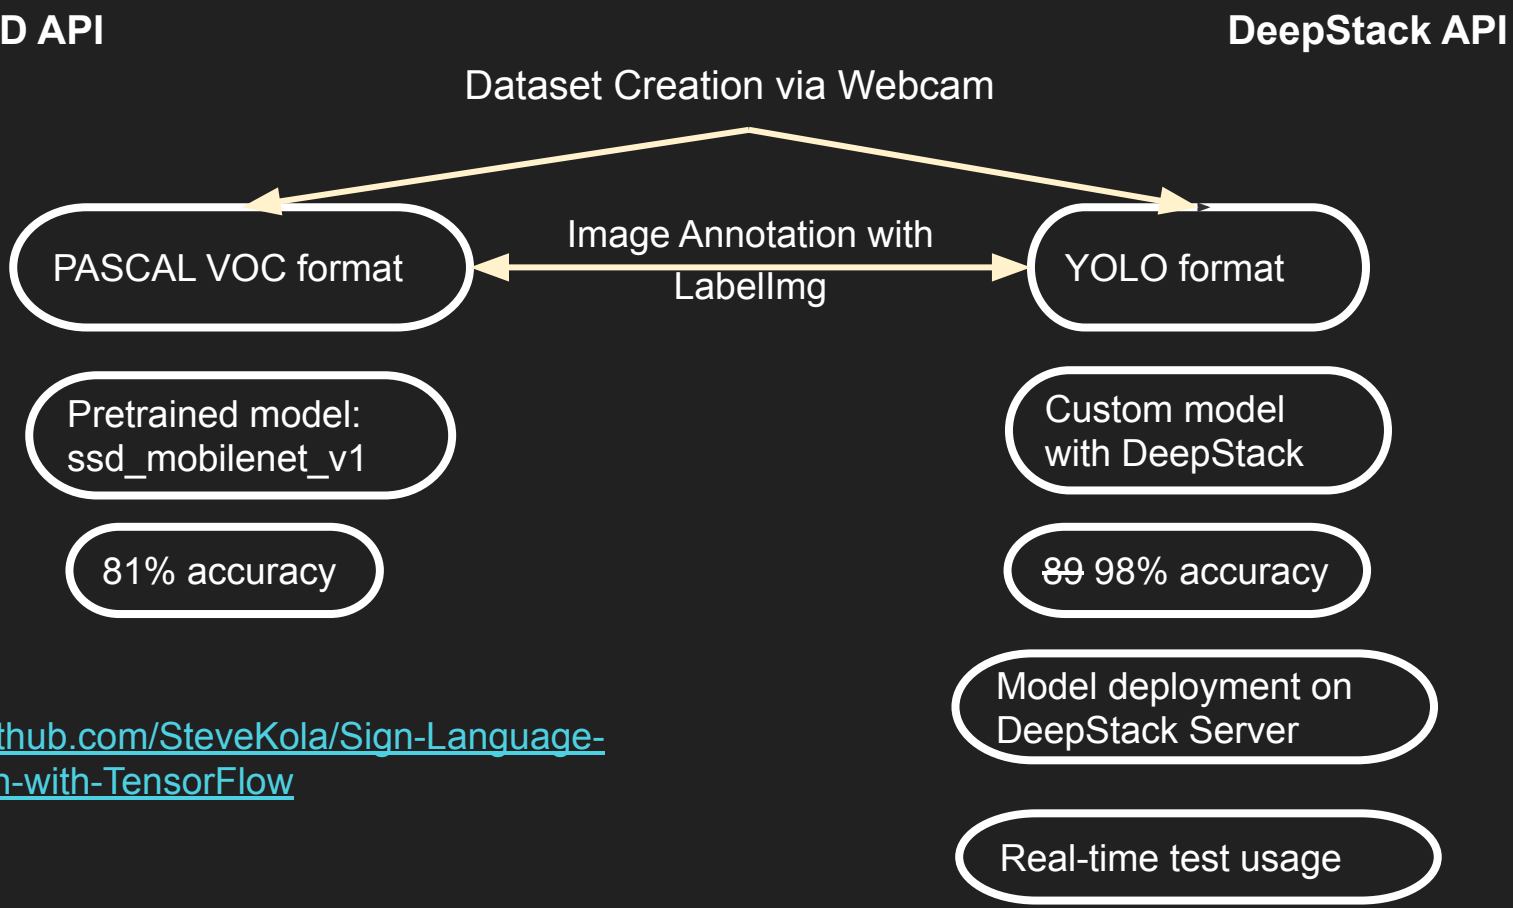

Inspiration

TensorFlow: Advanced Techniques Specialization

https://github.com/SteveKola/Sign-Language-to-Speech-with-DeepStack-Custom-API

Architecture

https://github.com/SteveKola/Sign-Language-Detection-with-TensorFlow

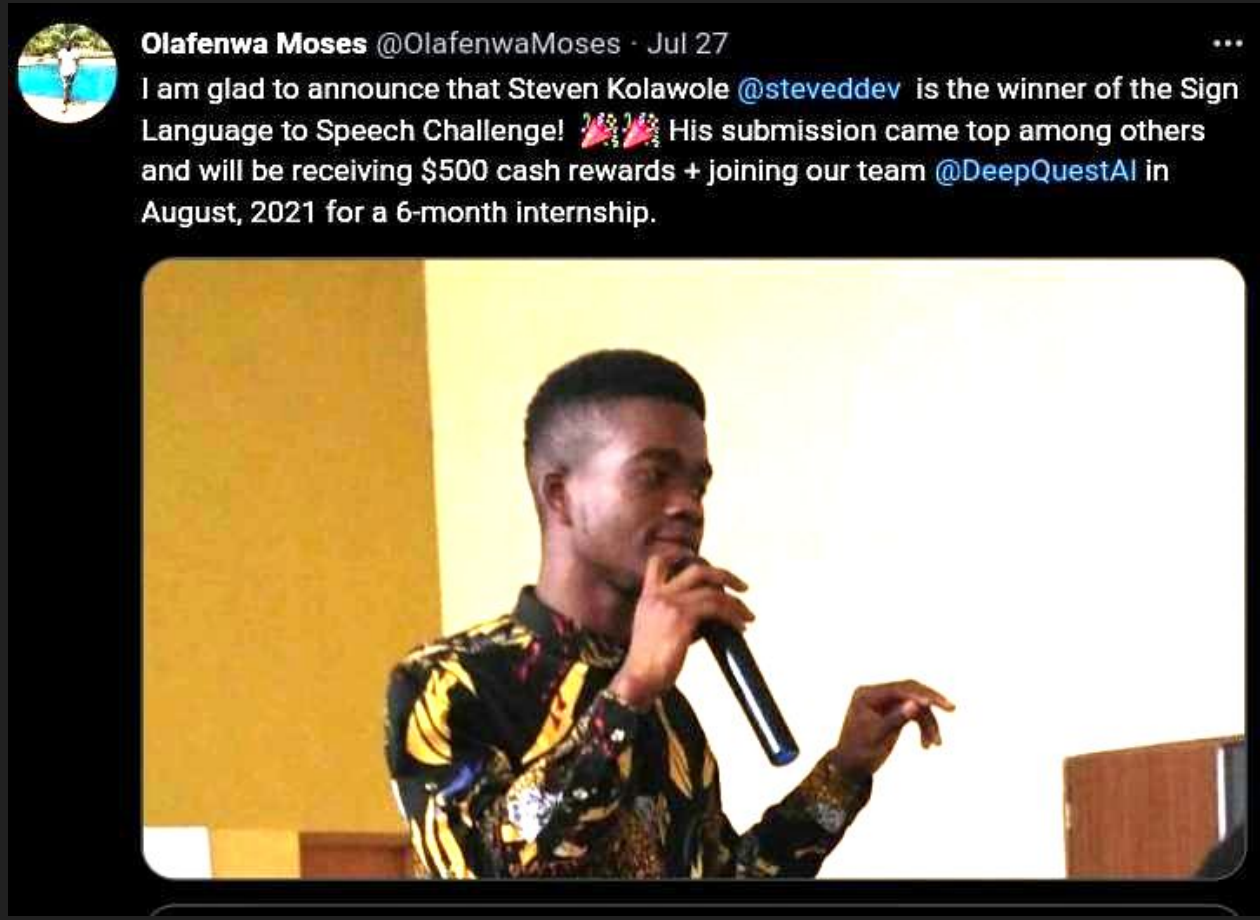

https://github.com/SteveKola/Sign-Language-to-Speech-with-DeepStack-Custom-API

Challenges

- It doesn’t work well for phrases that are series of several signs

https://github.com/SteveKola/Sign-Language-to-Speech-with-DeepStack-Custom-API

By the way,

https://github.com/SteveKola/Sign-Language-to-Speech-with-DeepStack-Custom-API

Next steps

- Retrain on the TFOD APIs method using a better architecture
- Increase dataset's range to support 50+ sign phrases
- Support for African languages using Machine Translation
- Write a paper???
